
a
SW wind lifts air over the windward face
SW wind
height above SW baseline (m)
distance along SW-NE section (m)
vertical air velocity w (m/s)
w = 0.75 m/s
launch
b
Lift vs height on the windward face
crude-glider sink 0.75-2 m/s
working band ~38 m
height above baseline (m)
vertical velocity w (m/s)
